There's more...

If you want to add a manager to the cluster, you need to do the following:

- On an existing manager, run the following command:

```
$ docker swarm join-token manager
To add a manager to this swarm, run the following command:

docker swarm join --token SWMTKN-1-0trltcq6gwhz9w40j3wpuqedjw
```

- Log in to the potential new manager host, and run the command from above:

```
$ docker swarm join --token SWMTKN-1-0trltcq6gwhz9w40j3wpuqed
This node joined a swarm as a manager.
```
